**FLOOD INFORMATION MAP**

**FLOOD ZONES**

A. "Designated Floodway" (100-year flood event) area subject to most frequent flooding.

B. "Designated Floodway" (500-year flood event) area subject to the most severe flooding.

C. "Designated Floodway" (1000-year flood event) area subject to the most frequent and severe flooding.

**LEGEND**

- Normal Water Surface
- 100-Year Flood Zone
- 100-Year Flood Zone
- Road of reference
- Railroads
- Boundaries
- Trees
- Floodplain

**FLOODING IN THE WATERFORD RIVER BASIN AREA**

Flooding poses dangers to personal property, damages farming operations and can be a threat to life. Continuous development of flood-prone land is not recommended. The development should be considered and planned for in a manner that will reduce the potential for future flooding.

Bysides, flooding is the water levels to a following one or two days of heavy rainfall. On April 15, 1986, the flooding resulted in widespread flooding. Flood waters damaged roads, railroads, and some buildings. Over 100 people were evacuated from their homes. The following is a map showing the extent of the flooding.

**ACKNOWLEDGEMENTS**

The Department of Environment and Lands, Newfoundland and Labrador, and the Newfoundland and Labrador Water Resources Division, Environment Canada, and the Department of Environment and Lands, Newfoundland and Labrador, provided support for the production of this map.
